EXPERIENCE

STARIC DEV | FULL-STACK ENGINEER

SEP 2024 - PRESENT

IBH - Expense Tracker

- A full-stack financial tracking system with real-time data synchronization, scalable APIs and efficient data querying. Shipped the app within two weeks with agent skills.

Rishta Auntie

- Engineered a scalable social matchmaking platform featuring short-video feeds, on-boarding flows with personality assessments, real-time chat, social authentication, analytics, and production-grade monitoring.
- Made agent-skill with the help of Cursor AI to accelerate development, including UI implementation, rapid prototyping, bug fixing, and code optimization by 74%.

Navia

- Built a QR-driven utility application enabling secure scanning, API-backed validation, and historical tracking with a clean, maintainable architecture.

EFYX

- Led end-to-end design and development of full-stack software solutions, contributing to system architecture, code quality, and complex problem-solving in cross-functional environments. Implemented real-time communication, secure payment processing and multi-language support.

THE WEB JOBS | SR. REACT NATIVE ENGINEER

JAN 2024 - SEP 2024

CvMaker

- A profile-driven application with secure API integrations, reusable custom hooks, and seamless social authentication for scalable user on-boarding.

Final Pass Down

- Led development of a transaction-focused platform integrating multiple payment gateways, real-time notifications, modular architecture, and predictable state management.

Pijn

- Designed a communication-eccentric application featuring real-time chat, structured contact management, room-based interactions, and reliable push notification workflows.

HIXOL | SR. REACT NATIVE ENGINEER

JAN 2022 - JAN 2024

Deliver Cart (e-commerce)

- Developed a scalable e-commerce application with secure payment processing, real-time chat, media messaging, push notifications, and centralized state management using modern React Native architecture.

Deliver Cart Driver

- Built a driver-side application enabling real-time communication, order handling, media sharing, and notifications through socket-based messaging and robust state management.

SRP Live

- Implemented media optimization features including video compression and an interactive media preview experience similar to modern messaging platforms.

ServTable

- Developed a session-based dining application supporting table selection, live ordering, cart management, and real-time order tracking via socket communication.

PrintServ

- Implemented a kitchen and printing system to process and print live orders efficiently in real-time restaurant environments.

ServWait

- Built a waiter-side application enabling table management, live order handling, session tracking, and real-time updates using socket communication and structured state management.

CODEMBED | JR. REACT NATIVE ENGINEER

NOV 2020 - DEC 2021

Dkangu (e-commerce)

- Built a commerce application with REST API integrations, optimized cart workflows, and order management system.
